**Sprint 2 Burndown:**

Sprint 1 Burndown:

For sprint 2, our burndown chart looks like progress was only made near the end, however, it does not reflect the actual work that we did throughout the sprint. This is due to us having to do more research (SPIKES) on topics such as authentication, session tracking, image uploading etc. which took longer than we predicted. Furthermore, we were also delayed by other deadlines and midterms. However, we eventually got the job done by the deadline which was our primary goal.

Comparison:
For sprint 1, we were unable to "start" our sprint on Jira as we did not have the permission to do so which explains the sudden spike 2/3rds of the way through. There is a difference between velocity points from sprint 1 and sprint 2. We increased our velocity in sprint 2 by 12 points, as after getting a feel of the project in sprint 1, we were confident that we could take in more work in sprint 2.
