**Sprint 4 Burndown:**

Sprint 3 Burndown:

For the sprint 4 burndown chart, we had a lot of stories that were very content heavy. However, we started early, which allowed us to progress smoothly and complete the specified user stories on time.

For the Sprint 3 burndown chart, we were able to work on more user stories on our sprint earlier and create progress throughout the sprint. We can make improvements by working on tickets even earlier when the sprint starts. Some of our team members still had very busy schedules and were only able to make significant progress near the end. We hope to work and complete our tickets even earlier.

Comparison:
Sprint 3 was an important sprint for the team. It allowed us to understand the amount of work we as a team can do. This translated very well into Sprint 4 as we had even more heavy user stories to tackle. With our experience from Sprint 3, we were able to plan better and it shows in our burndown chart as well. For the sprint 4 burndown chart, it can be seen that we were making steady progress with our user stories and that we had planned appropriately for the amount of work that needed to be done. The sharp decline at the end of the sprint 4 burndown chart indicates all tasks came to completion around the end of the sprint and shows that our

planning was excellent as we completed all the user stories by the appropriate due date. Overall, the planning and organization skills that we obtained during Sprint 3, allowed us to complete Sprint 4 and with it, all the user stories we had in our backlog.
